The invention as defined in the present specification is a method for transferring heat using first and second gas adsorbent materials, the second material being relatively thermally isolated from but in continuous gas communication with the first material where the first material is heated to desorb a gas an adsorbed gas which passes to and adsorbs onto the second material, cooling the first material so that the gas desorbs and passes there from to be re adsorbed onto the first material whereby the second material is cooled by desorption of the gas

None of the cited documents either singly, nor in obvious combination, disclose or fairly suggest the invention as defined in the present claims. The claimed invention is therefore novel, has an inventive step and is industrially applicable.
